产品特点 >>

- 采用均匀分散热风之高性能热风扩散装置，保持塑料干燥温度均匀，增加温度均匀，增加干燥效率。
- 特有热风管弯型设计，可避免粉屑堆积于电热管底部，引起燃烧。
- 料桶为不锈钢设计。
- 紧密压铸的铝质外壳，表面光滑，保温性能好。
- 隔尘静音风机，杜绝进入原料尘埃，确保原料精纯度。
- 桶体及底座设计有视料窗，可直视观察内部工作情况。
- 装有过热保护装置，可减少人为或机械故障产生的意外。

- With high-performance hot air diffusion device which can uniform dispersion hot air, keep plastic drying and uniformity, increase the temperature even and dry efficiency
- Special hot air pipe bending type design, which can avoid the powder accumulated at the bottom of the heating tube, cause burns
- Raw materials contact surface are all made of stainless steel design
- The closely casting aluminum shell, insulation performance is good
- Mute fan, which can prevent dust from entering raw materials, ensure the purity of raw materials
- Design material window in Barrel and base, which can look into servation internal workings
- Equipped with overheating protection device, Which can reduce by artificial or mechanical fault

热风式塑料干燥机，可与各类塑料成型机配套使用，受到塑料机械和塑料制品各厂家的欢迎。将塑料原料装入热风干燥机内，利用该产品的热风排除塑料颗粒表面或内部的水分，使原料充分干燥有效防止了塑料成型后产生的包泡/银纹流痕/龟裂/透明度不佳等不良品质的现象。

Hot air material drying machine, which supporting the use of various types of plastic molding machines, are welcome by the company of plastic machinery and plastic product. hot air dryers, eliminate plastic particles surface or internal moisture by hot air, make raw material fully dry, effectively prevents the plastic molding generation bubble/silver lines/flowmark/cracked/transparency strife and other bad quality phenomenon after bag

原料温度参考表：
Raw material temperature reference table

原料 Material	干燥温度 Drying temperature	干燥时间 Drying time
<i>RECOMMENDED DRYING GUIDE</i>		
PE.PP	80°C	2小时(hour)
PS	82°C	2小时(hour)
ABS	82°C	2小时(hour)
Cellulose series	71°C	2小时(hour)
Polycarbonate	120°C	2小时(hour)
Nylon	82°C	2.5小时(hour)
PVC	71°C	1.5小时(hour)

以成型机每小时射出量计算，
Calculated by the injection volume of molding machine per hour
选择方法：每小时射出量×2.5=干燥机装料量选择
等于或大于计算结果的干燥机
Selection method: injection quantity per hour × 2.5 = dryer loading quantity select a dryer equal to or greater than the calculation result

各部件名称与结构：

- 风机(Fan)
- 风量调节机(Air Damper)
- 控制箱(Contro-Box)
- 自动温度调节器
(Electronic Thermo-controller)
- 风机开关(Fan Switch)
- 电热开关(Heater Switch)
- 加热筒(Heating Cylinder)
- 电热管(R.H.Pipe Heater)
- 感温体(Thermo-couple)
- 温度指示针(Thermo-meter)
- 底座(Base)
- 人拉手(Gate)
- 通风支架(Shade Separator)
- 料斗(Hopper)
- 料斗(Hopper)
- 简体合页(Leaf of hopper)
- 硅胶(Silica gel)
- 下沿(Down Ring)
- 简体(Drying Hopper)
- 视料窗(sight Case)
- 大板手(Handle)
- 上沿(Up Ring)
- 弯头(Elbow)
- 筒盖(Cover)
- 筒盖合页(Leaf of cover)
